More input fields = longer journey time.

Key Finding

BOL is on the higher end of registration fields and sign up journey time, compared to competitors.

Opportunity to Explore

Potential to reduce the amount of fields within the BOL sign up. Personal information such as gender, date of birth and phone number could be pushed to be inputted AFTER signing up. This will speed up the first landing and sign up on the registration page.

UX Analysis/Conclusion

Receiving the deposited funds was in the middle-ground for BOL, compared with competitors, however communication the customer was very clear, which avoids frustration and unclarity.

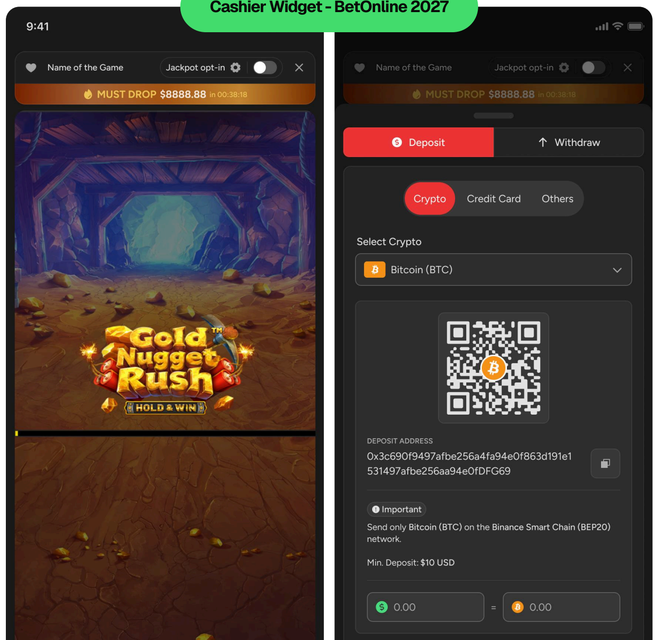

Key Finding

BOL is the median when comparing click amount and journey time. Not the best, not the worst. Room for improvement. We need to bear in mind the **Cashier Widget** that will be released in the future.

Opportunity to Explore

BOL in general was a smooth process, compared to competitors. Perhaps having a currency (most used by all users OR previously used by individual user) pre-selected would speed up the process.

Good communication regarding deposit success to the user from BOL. Although the journey into Casino and individual Casino game could be improved.

Key Finding

BOL was slower than competitors. Starting point was on Sportsbook, which meant one extra interaction.

Opportunity to Explore

Casino search field could be one level less. For simple search functionality we could have it outside of the filters section, rather than the user having to open the drawer, tap filters, type in search bar and search.
